FAQS

- **What is BlephEx?** BlephEx is a medical treatment designed to clean and exfoliate the eyelids, removing debris and bacterial biofilm that may contribute to blepharitis
- **How does it work?** BlephEx works by mechanically scrubbing the lash margins. The procedure is painless but can tickle a little
- **What does it treat?** Blepharitis which contributes to ocular inflammation and discomfort
- **Are there any contraindications?** This procedure is avoided in patients with active ocular infections
