CUSTOM 3D CONTACTS

BENEFITS

- Customised 3D printed contact lenses suitable for complicated cases
- Comfort is reported to be amazing due to 3D technology
- Able to better correct regular and irregular astigmatism
- Improved comfort as lenses vault over cornea
- Stable vision correction
- Reduced dryness and irritation
- Management of ocular surface disease and severe dry eye disease

OTHER FACTORS

- Initial cost
- Initial insertion and removal can be challenging but does get easier
- Regular follow ups (6-12 monthly reviews)
- Risk of complications and inflammation, and in rare cases - infection (same as other contact lenses)

PRICING

Each pair (Lasts 12-18 months)

\$3170

FAQS

- **What are sMap Contact Lenses?** Customised 3D printed mini-scleral contact lenses
- **What is the process of fitting them?** Initial appointment explores eligibility, a refraction is made over a standard scleral contact lens. The patient then returns for a mapping appointment. The custom lenses take ~2 weeks to be manufactured and are delivered at a fitting appointment. We then do a final review ~2 weeks later.
- **Are they as uncomfortable as RGPs?** Absolutely not! The technology has advanced drastically meaning that these lenses are stable on your eye and are much thinner than previous RGPs or scleral contact lenses. They are 3D customised lenses!
- **What conditions are they most suitable for?** Keratoconus, chronic dry eye, corneal grafts, high prescriptions, post LASIK ectasia, post radial keratotomy, irregular corneas and corneal nerve pain management
